Containerizing Angular Applications with Docker

ANGULAR AND CONTAINERS

Dan Wahlin

WAHLIN CONSULTING

@danwahlin www.codewithdan.com

Course Agenda

Prerequisite knowledge

Angular and containers

Creating a multi-stage Dockerfile

Deploying the image and running the container

Running multiple containers

nginx

Angular

Docker Compose

Images

Dockerfile

Containers

Docker

Angular and Containers

Module Overview

Prerequisites to maximize learning

Key course concepts

Why use containers?

Running the Angular application locally

Running the Angular application in a
Container

Source Code Link

Prerequisites to Maximize Learning

Course Prerequisites

**Images and
Containers**

**Docker
Commands**

**Angular
Fundamentals**

Additional Courses

**Docker for Web
Developers**

**Integrating Angular
with ASP.NET Core
RESTful Services**

**Integrating Angular
with Node.js
RESTful Services**

Key Course Concepts

Images and Containers

Docker Image

Example: nginx with Angular

Docker Container

Created by using an image, runs
your application

Image

A read-only template composed of layered filesystems used to share common files and create Docker container instances.

Container

An isolated and secured shipping container created from an image that can be run, started, stopped, moved and deleted.

Key Docker Commands

`docker pull <image name>`

`docker images`

`docker rmi <image ID>`

`docker build`

`docker run <image name>`

`docker ps -a`

`docker rm <container ID>`

Why Use Containers?

What About CDNs?

Shipping Code to a Destination

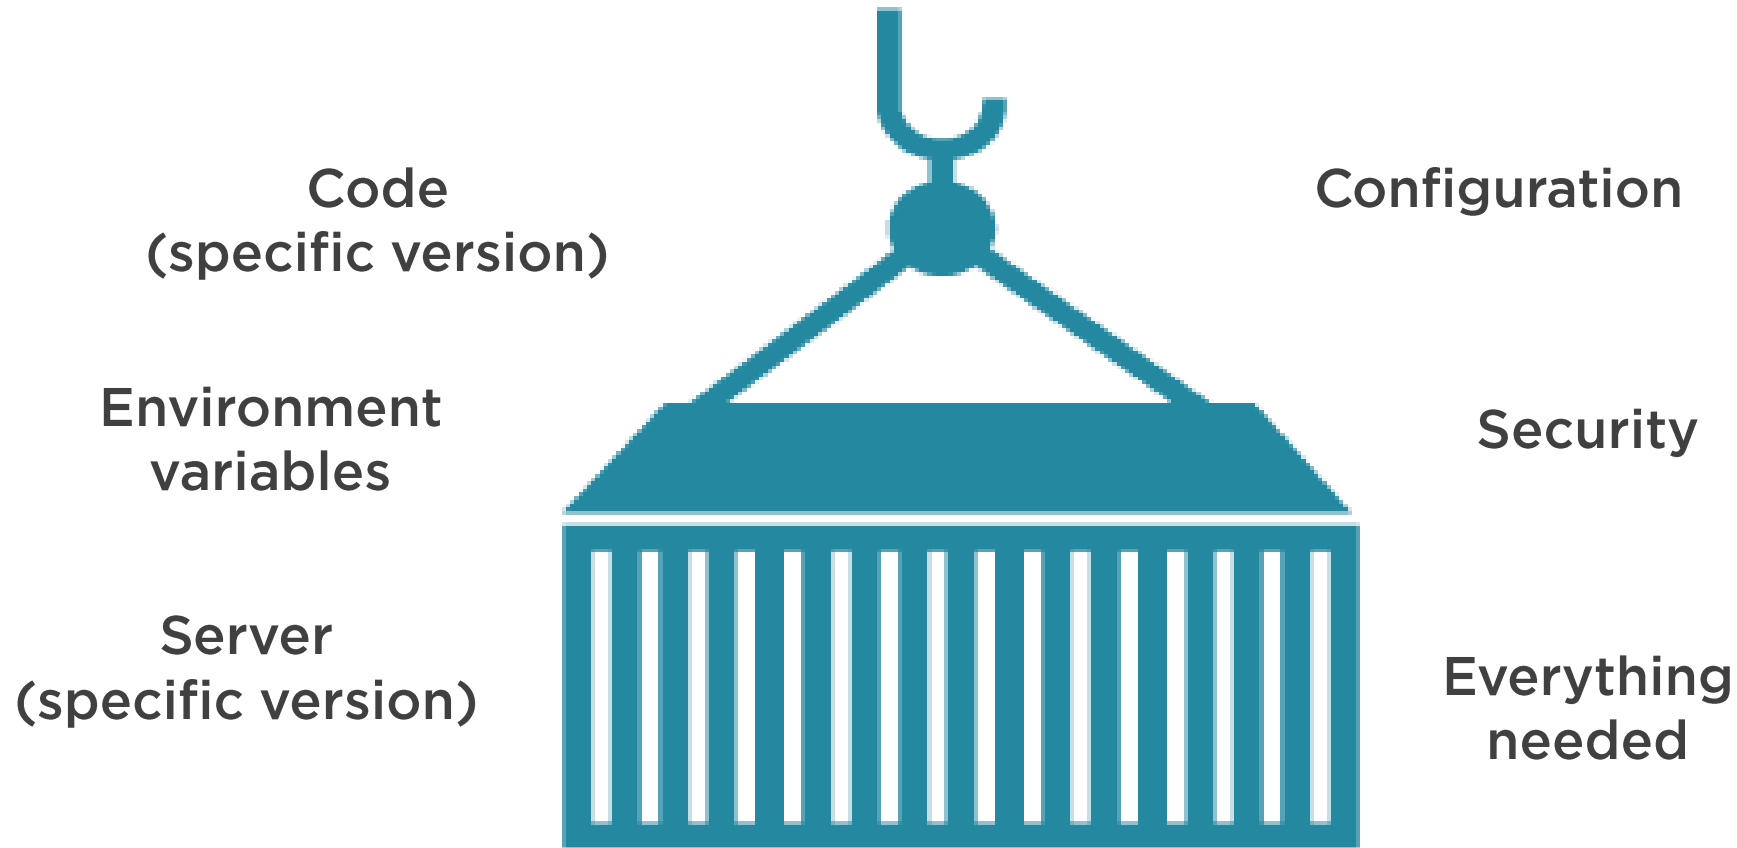

Option 1: Ship Source Code

Option 2: Ship a Docker Image

What Goes in a Container?

Benefits of Containers

Accelerate
developer
onboarding

Eliminate app
conflicts

Environment
consistency

Ship software
faster

Running the Angular Application Locally

Running the Angular Application in a Container

Software Requirements

VS Code

<https://code.visualstudio.com>
(any editor can be used)

Docker Community Edition

<https://docker.com>

Summary

Containers provide several development and deployment advantages

Angular can be run in a container

Docker images and containers can be used to ship Angular applications between environments
